NEW: THERAPY CHAIR TIMO

// THE RETURN OF TIMO

A therapy chair enables active participation in everyday life by optimizing sitting on a suitable chair - whether in kindergarten, at school or at home.

TIMO enables learning and playing in different positions and heights .

TIMO the new therapy chair from **HOGGI** with innovative **parallelogram height adjustment** is easy to use, has a wide range of applications and a modern design.

The seat height and tilt can be adjusted quickly and easily thanks to the **ergonomically positioned release lever** on the push handle.

A change of position from the school table to the sitting circle is possible in just a few simple steps.

The **removable footrest system** offers an extremely low seat height for activities close to the ground.

The movable seat unit and a negatively adjustable seat and backrest angle enable an active sitting position optimized for the child, which promotes independent participation in the action.

The backrest attachment can also be removed to activate the back muscles or for other therapeutic measures.
